Press Release

For Immediate Release: September 17, 2008

RPM Manufacturing introduces EZ VAC Vacuum & Detailing and EZ AIR Tire Inflation Equipment lines to the Car Wash and C-Store Markets.

Innovative design features address challenges faced by car wash and convenience store owner/operators, distributors, and service personnel.

Cedar Rapids, IA: RPM Manufacturing, Inc. today announces the introduction of the EZ VAC Vacuum & Detailing and EZ AIR Tire Inflation Equipment lines, the latest in innovative, economy-class car wash, commercial fleet, combination air vacuums and stand-alone air and air/water machines.

The EZ VAC and EZ AIR product lines offer a number of new and innovative design features that provide maximum security, durability, easy installation, and better serviceability for value-minded owner/operators seeking uncomplicated and effortless operation and maintenance, yet dependable and theft-resistant equipment.

With the EZ VAC EZ Install Mounting System bracket and EZ AIR EZ Access cabinet design, installation is streamlined and made simpler. On EZ VAC models, pre-mount installation can also be achieved. The EZ Control Module incorporates all electronic components including the timer, power terminals, fuses, and relays in a compact, reliable, all-in-one device eliminating complicated wiring, excessive components, and costly replacement parts. With the built-in, on-board EZ Diagnostic service LEDs, servicing and diagnosing fuses, relays, and incoming and motor line power status is made simple. On EZ VAC models the EZ Access Service Channel eliminates awkward wire feeding and conceals the EZ Clamp Hose Adapter System. The combination of all these features results in time-saving maintenance, maximum operating time, and lower costs to own.

“The EZ VAC Vacuum & Detailing and EZ AIR Tire Inflation Equipment lines are the newest, most innovatively designed profit centers available in the commercial car care industry today. Our goal is to provide high-quality, cost effective, easy to maintain, vacuum, detailing and tire inflation equipment to car wash and convenience store owner operators,” says RPM Manufacturing’s president, Bob Woodard. “We have taken what car wash owners, c-store owners and distributors have told us they’ve wanted and designed a product that truly offers the best value available in the industry today.”

"It's all about the total cost of ownership over and above just what owner/operators pay for their profit center equipment. They want equipment that is as least costly to operate and maintain while still providing for a pleasant, uncomplicated and positive experience for their patrons where the increased likelihood of repeat business remains," states RPM Manufacturing's vice president of sales and marketing, Greg Stebral. "We're confident that The EZ VAC and EZ AIR lines of car care equipment will deliver on the lowest total cost of ownership claim."

#####

RPM Manufacturing, Inc. specializes in the design and manufacture of high-quality commercial-grade vacuums, detailing, and tire inflation equipment for the car wash, convenience store and fleet maintenance detail industries. Its management team has 25 years of experience in the industry and the focus of their products is to provide ease of installation, cost-effective aftermarket integration and replacement, and low-cost serviceability over their useful life.
